Introduction

Load the ToothGrowth data and perform some basic exploratory data analyses

Load the ToothGrowth data and perform some basic exploratory data analyses

```
#  libraries
library(ggplot2)
```

```
## Warning: package 'ggplot2' was built under R version 3.5.3
```

```
library(datasets)
library(gridExtra)
library(GGally)

# The Effect of Vitamin C on Tooth Growth in Guinea Pigs
data(ToothGrowth)
toothGrowth <- ToothGrowth
toothGrowth$dose <- as.factor(toothGrowth$dose) #  factor conversion
```

basic summary of the data

```
str(toothGrowth)
```

```
## 'data.frame':    60 obs. of  3 variables:
##  $ len : num  4.2 11.5 7.3 5.8 6.4 10 11.2 11.2 5.2 7 ...
##  $ supp: Factor w/ 2 levels "OJ","VC": 2 2 2 2 2 2 2 2 2 2 ...
##  $ dose: Factor w/ 3 levels "0.5","1","2": 1 1 1 1 1 1 1 1 1 1 ...
```

```
summary(toothGrowth)
```

```
##       len        supp     dose
##  Min.   : 4.20   OJ:30   0.5:20
##  1st Qu.:13.07   VC:30   1  :20
##  Median :19.25           2  :20
##  Mean   :18.81
##  3rd Qu.:25.27
##  Max.   :33.90
```

```
head(toothGrowth)
```

```
##    len supp dose
## 1  4.2   VC  0.5
## 2 11.5   VC  0.5
## 3  7.3   VC  0.5
## 4  5.8   VC  0.5
## 5  6.4   VC  0.5
## 6 10.0   VC  0.5
```

```
table(toothGrowth$supp, toothGrowth$dose)
```

```
##
##      0.5  1  2
##   OJ  10 10 10
##   VC  10 10 10
```

Now we do Analysis of Variance ANOVA test

```
anova <- aov(len ~ supp * dose, data=toothGrowth)
summary(anova)
```

```
##             Df Sum Sq Mean Sq F value   Pr(>F)
## supp         1  205.4   205.4  15.572 0.000231 ***
## dose         2 2426.4  1213.2  92.000  < 2e-16 ***
## supp:dose    2  108.3    54.2   4.107 0.021860 *
## Residuals   54  712.1    13.2
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
```

Results here support that there is a notable interaction between the length (len) and dosage (dose) with F values is 15.572 and with p<0.01. Also there is weak interaction between the combination of supplement type (supp) and dosage (dose) compared to the length (len) , F= 4.107 , p<0.05.

Use confidence intervals

```
confint(anova)
```

```
##                   2.5 %    97.5 %
## (Intercept)  10.9276907 15.532309
## suppVC       -8.5059571 -1.994043
## dose1         6.2140429 12.725957
## dose2         9.5740429 16.085957
## suppVC:dose1 -5.2846186  3.924619
## suppVC:dose2  0.7253814  9.934619
```

```
print(model.tables(anova,"means"),digits=3)
```

```
## Tables of means
## Grand mean
##
## 18.81333
##
##  supp
## supp
##    OJ    VC
## 20.66 16.96
##
##  dose
## dose
##   0.5     1     2
## 10.60 19.73 26.10
##
##  supp:dose
##     dose
## supp 0.5   1     2
##   OJ 13.23 22.70 26.06
##   VC  7.98 16.77 26.14
```

conclusions

from our observation, We conclude that a higher dose is the main factor to increase the Tooth Growth using VC but OJ has better results at lower doses.
